

MALLEABLE IRON RANGE COMPANY FACTORY

Beaver Dam, Wisconsin

The present MONARCH factory requires 430,000 square feet of floor space. This complete manufacturing plant consists of modern foundries, machine shops, enameling rooms, nickel "Mircobrite" department, assembling rooms and warehouses, devoted exclusively to the manufacture of modern kitchen equipment for commercial and domestic use.

The true merits of a product to be put to daily use such as a range are governed by the materials used in its manufacture—the manner in which it is made and the efficient performance of its purpose. The present MONARCH design is the result of over thirty-five years of successful range building experience. Only the highest grade materials are used in its construction.

REMEMBER: Monarch Ranges are built with more Malleable Iron parts than any other range in the world—and are riveted to last.
